# ADRIAN IONITA

o797 187 0684 adrian@ionita.me Adrian Ionita thttps://github.com/iceiony

profile

Data science engineer focused on computational modeling, with a strong background in software engineering and a deep understanding of the scientific and development challenges faced when building machine learning systems. I am able to support companies in data science tasks, develop research concepts and turn them into production code; recognized for a keen ability to engage with stakeholders, accurately discerning their true needs through attentive listening and insightful questioning. My approach ensures the delivery of solutions that are not only technically sound but also highly relevant and applicable, thereby empowering organizations to meet their objectives effectively.

# tech skills Programming

Python, R, JavaScript, Test Driven Development (TDD), Docker, Azure, AWS, PySpark, C++, SQL, MATLAB, C#, CUDA

#### Data Science

Principal Component Analysis, Independent Component Analysis, Fourier Domains, Monte Carlo Markov Chains, Cluster Analysis, Anomaly Detection, Imbalanced Learning, Entity Resolution, Bayesian Methods, Particle Filters

#### Machine Learning

Deep Learning (Classification & Regression), RNN, RBF Networks, SOM, Committee Machines, Reinforcement Learning, Hebbian Learning, Improving Generalisation & Training Speed, Natural Language Processing (NLP), Decision Trees / Random Forests

# employment

#### Data Science Engineer, SC+ - contract

Jan 2025 - Mar 2025

- Designing the system architecture for a product linking information across public sources of data at scale and with a strict focus on operational security.
- Developing data cleanup and entity resolution to identify people and companies across different data sources.
- Collaborating on product design and feasibility, helping design the pitch deck and ultimately winning the contract.
- Coordinating team members to deliver a useful solution to the end client's needs, whilst meeting the company's own
  objectives for a strategic platform.

Key Skills: Python, Software Architecture, Entity Resolution, Splink, PySpark, Graph Database

#### Data Science Engineer, Programable.io (via SWBI) - contract

Nov 2023 - Nov 2024

- $\bullet \ \ Developing \ an insurance \ fraud \ detection \ system, leveraging \ AI/ML \ to \ find \ more \ likely \ cases \ of \ fraud.$
- $\bullet \quad \text{Contributing to the product design by leveraging the art of the possible in AI/ML to enhance the end user productivity.}$
- Exposing prediction reasoning to help investigators understand the model's decision making.
- · Simplifying graph representations of claims to help investigators find collusion and relations to past cases of fraud.
- Predicting the duration of investigations to prioritise cases by the best financial outcome.

Key Skills: Python, TDD, Random Forests, Imabalanced Learning, Information Theory, Network Graphs, Entity Resolution

#### Data Scientist, EDF Trading - contract

Nov 2021 - Nov 2023

- Deriving, from raw trade data (i.e. level 3), the exact logic to calculate price candles, saving £100k / year in licensing.
- Developing trade anomaly detection algorithm, helping company satisfy compliance and regulatory obligations.
- Developing prediction algorithm for next day's price correlations (96.5% accuracy); to estimate future profit and loss.
- Implementing liquidity algorithm for a more a representative view of the market.
- Developing systems, tools and algorithms for extracting bid/offer information from emails, eliminating time waste from manual retrieval.

Key Skills: Python, JavaScript, Flask, Docker, TDD, NLP, Random Forests, RNN

# R Developer, LLOYDS (via EPAM) - contract

Mar 2020 - Oct 2021

- Supporting the actuaries modelling central capital, in the smooth migration of their systems to Azure.
- Optimising R functionality to bring large performance improvements (10x) by optimising data access in Azure.
- Training actuaries on R best practices, improving the reliability of their code and day to day operations. *Key Skills: R, Rcpp, C++, SQL, RSConnect, Tidyverse, TDD*

## R Developer, UBS (via Accenture) - contract

Jun 2019 - Feb 2020

- Onboarding risk models into simulation platform ensuring reliable operation for regulatory runs.
- Setting up code base for continuous integration and deployment leading to a streamlined development process.
- Adapting code for execution at scale using SparkR.

Key Skills: R, CI/CD, SparkR, TDD

## Data Scientist NLP, EDF Energy - contract

Dec 2018 - May 2019

- · Consulting the business on AI/ML capabilities and lesser known limitations, shaping long term AI strategies
- Identifying value opportunities from applied data science, and language processing automation
- Delivering insights into customer queries and complaints, guiding business focus to high volume chat-bot cases Key Skills: Python, LDA topic modeling, CorEx topic modeling, Neural Network Classification, TDD

#### Data Scientist / R Developer, Deutsche Bank (via HCL) - contract

July 2018 - Apr 2019

- Bringing proof of concept model for assessing IT Risk into production readiness.
- Assessing model correctness and improving credibility with business stakeholders.
- Optimising computation time which reduced execution from weeks to hours. *Key Skills: R, Oracle PLSQL, TDD*

#### Further Employment History Available on LinkedIn

2010 - 2016

# additional projects

# Crypto Trading Algorithms and Analysis

Nov 2021 - Current

- Developing a volatility based trading algorithm that leverages the high price fluctuation of crypto assets.
- Algorithmically determining the optimal trading points for historic data.
- Estimating price direction from orderbook. Key Skills: R, C++, Dynet, ctree, algorithms

# Semantic Representation In Human Language

Sep 2016 - July 2021

- Developing custom sentence tokenising, enabling reuse across non-english languages
- Researching unsupervised training technique for language structure and semantic representation
  Key Skills: R, Python, Deep Learning (RNN), PyTorch, Dynet, C++

## Efficient input sampling for determining minimum viable data

Jan 2018 - Apr 2018

- Designing algorithm for a small data set, which determines the miminimum number of records to form a representative view of the input space.
- Developing Bayesian inference technique to estimate the minimum viable records needed for training a model proposition. Key Skills: Python, Bayesian Methods / Probabilistic Programming

# Fuel Savings Prediction Model

Jan 2017 - May 2017

- · Designing statistical model that estimates fuel and repair savings from optimal tyre inflation for fleets of vehicles
- Guiding junior analyst in model implementation, teaching good code practices Key Skills: R, Monte Carlo Markov Chain

#### education

# MSc. Computational Neuroscience and Cognitive Robotics, University Of Birmingham,

Focused on computational methods, modeling and neural networks

Graduated with distinction

MSc. Computer Security, University Of Birmingham,

2010

2016

Graduated with distinction

# Oracle Academic Initiative, University Of Bucharest, Romania,

2009

BSc. Computer Science, University Of Bucharest, Romania,

2009

Degree focused on algorithmics and theoretical computer science

Equivalent of distinction

## Diploma for Excellence in Computer Science, National Center For Excellence, Romania,

2006

Awarded for academic performance in advanced algorithmics
